

# BASECAMP DOMES

For excursions into extreme weather, our domes go where no shelter has gone before because they are the only structure designed to withstand the impact of polar elements. Featuring insulated liners, insulated floors, and a wood stove with stove cap and flashing, the Shelter Domes that Pacific Domes provided to our high-end clients at the Amazing Escapes Eco Resort kept their guests very comfortable, despite the high-winds and sub zero temperatures of the Bolivian Mountains at an elevation of 14,000. Thanks to the aerodynamic and energy-efficient shape of the geodesic dome, the winds posed little threat, and the frigid air was sealed out. Hurricane-proof, and able to shed and sustain heavy snow loads, Shelter Domes offer a resilient and strong shelter for all ages to make a stand.
