90ft Dome: Nakshatra Mirugashirusham

Miruguashiram is a very light-hearted, devic like energy; playful and highly creative and supporting very high levels of success and positive, balanced prosperity as well as loving and fun relationships. This space is excellent for celebrations, ceremonies, dancing, music, art shows, seminars, etc. This energetic wave length supports people coming together in mutually joyous and rewarding creativity and is very supportive for both altruistic and commercial ventures. Both spiritual and scientific endeavours

are supported. Strong prosperity with high moral principles is emphasized. This wave length blesses all endeavours. It flows with the east direction in its relationship with the earth's energy flows and their mutually related inherent qualities. It is very nurturing and supportive to assist in healing of health issues, in balancing the human ego, in spiritual enlightenment, and in supporting positive family and community relationships. This wave length is a beautiful and powerful magnetic attraction for nearly all
kinds of creative adventures and for healing intimate relationships as well as bringing people together in mutually rewarding community endeavours. It is very supportive for good communication especially on personal and intimate levels. Fearlessness (the ability of the deep inner perception to see through and beyond the illusions of fear-based motivations) is strongly emphasized and empowered. This supports positive decisions and actions which are both self empowered and which are compassionate in their considerations of the highest welfare of all beings.

Instructions for aligning the main entrance door to assist in maximizing the structure's conduction of the natural and powerful energies of the terrestrial and celestial energy grid systems. The qualities of this Nakshatra are enhanced by placing the Entry Door on the east side of the structure and facing 2.3 (1.5 to 2.5) degrees north of true east (true east is 90 degrees angle to true north, not magnetic north). This is accomplished by turning the entire structure until this alignment for the Entry is obtained.
